WHAT COURSES SHOULD I BUILD FIRST?

Try one of these:

- **Lower Level First**
  Let students start in Canvas

- **High Enrollment First**
  Introduce the most students to the new LMS

- **Less Complex First**
  Familiarize yourself with the system and take your time planning more complex courses

**SUMMARY:**
Work together with your department. Consider the student experience. Get building!

HOW TO BUILD COURSES IN CANVAS

A CRASH COURSE

CREATE A MASTER COURSE
Use a master course to build an optimal version of your course. Include all your content and assignments, but don’t worry about dates. At carmen.osu.edu, decide if you’d like to customize a pre-built model course or build your own from scratch.

UPLOAD COURSE FILES & CREATE PAGES
Upload documents directly from your desktop or import from Carmen (D2L).
TIP! Pasting content into Pages gives you the flexibility to edit on the fly within Carmen (Canvas).

BUILD ASSIGNMENTS
Create any activities students will turn in for a grade — this builds your gradebook too!
TIP! Use the On Paper assignment type for in-class activities.

ORGANIZE THE PRESENTATION OF MATERIAL
Using a Module for each course topic can help organize Pages, Files and Assignments.
TIP! You can determine what students see first by selecting a homepage for your course.

CREATE ACADEMIC COURSES
Create an academic course and copy your master course into it. Adjust assignment dates to align with the current term.
TIP! Upload a printable version of your syllabus as a course File and create a link to it from the Syllabus tool.
